Deploy ESET Endpoint products for macOS using Jamf Pro

Steef | ESET Nederland - 2021-02-23 - Reacties (0) - ESET Endpoint Security

## Issue

- Jamf Pro deployment for ESET Endpoint for macOS Big Sur
- Configure System Extensions and Privacy Preference Policy Control (PPPC)
- <u>Create Policies</u>
- Additional Options
- Jamf Pro deployment for ESET Endpoint for macOS (earlier versions)

## Solution

Follow the instructions below to deploy ESET Endpoint for macOS Big Sur using Jamf Pro to manage using ESET Security Management Center/ESET PROTECT.

I. Configure System Extensions and Privacy Preference Policy Control (PPPC) profile

One configuration profile can use both settings System Extensions and PPPC (Big Sur) are required to deploy to ESET Endpoint products, but if all machines are Big Sur, one configuration profile can be used for both System Extensions and PPPC settings.

 Click Configuration Profiles to set the approval for System Extensions and PPPC and then click New to add a new configuration profile (one configuration profile can contain both System Extension and PPPC settings).

6. Add in the following information for your applicable ESET product:

Add both ESET Endpoint Antivirus and ESET Endpoint Security in the same PPPC setting If you are deploying both ESET Endpoint Antivirus and ESET Endpoint Security, you can add them in the same PPPC setting by clicking the + sign (plus) at the top right and then adding the information for the additional product.

ESET Endpoint Antivirus:

- Identifier: com.eset.eea.6
- Identifier Type: Bundle ID
- Code Requirement: identifier "com.eset.eea.6" and anchor apple generic and certificate 1[field.1.2.840.113635.100.6.2.6] /\* exists \*/ and certificate leaf[field.1.2.840.113635.100.6.1.13] /\* exists \*/ and certificate leaf[subject.OU] = P8DQRXPVLP
- App or Service: SystemPolicyAllFiles
- Access: Allow

ESET Endpoint Security:

• Identifier: com.eset.ees.6

- Identifier Type: Bundle ID
- Code Requirement: identifier "com.eset.ees.6" and anchor apple generic and certificate 1[field.1.2.840.113635.100.6.2.6] /\* exists \*/ and certificate leaf[field.1.2.840.113635.100.6.1.13] /\* exists \*/ and certificate leaf[subject.OU] = P8DQRXPVLP
- App or Service: SystemPolicyAllFiles

III. Additional options

- Verify you can manage the ESET Endpoint using ESET Security Management Center: In the ESMC **Computers** section you will see the Jamf endpoint in the **All** Group.
- If you did not enter the License Key or Security Admin during the install scripts, you can <u>activate using ESET Security Management Center</u>.
- Extension Attributes: Extension Attributes show information regarding ESET products in the **Computer details** → **Search Inventory** → **General** section.

Follow the instructions below to add the Extension Attribute:

 In the main window, click the All Settings gear icon → Computer Management → Extension attributes.

## I. Configure KEXT and PPPC profile

One configuration profile can contain both settings KEXT (High Sierra 10.13+) and PPPC (Mojave 10.14+) or one configuration profile can contain both KEXT and PPPC settings if all machines are Mojave.

 Click **Configuration Profiles** to set the approval for the KEXT and PPPC and then click **New** to add a new configuration profile (one configuration profile can contain both KEXT and PPPC settings).

- 3. Download the following ESET Security product and ESET Management Agent installation scripts:
  - ESET Security product installation script: <u>ESETavJamf.sh</u> (right-click and select "Save link as")
  - ESET Management Agent installation script: Download the ESMCAgentInstaller.sh file from your ESET Security Management server, follow the instructions to <u>Create Agent Live Installer</u>.

4. After downloading the scripts, <u>add the scripts to Jamf</u> (this link takes you to the Jamf Pro Administrator's Guide).
