ESET Security Daily Warmup for MSP

Steef | ESET Nederland - 2019-12-31 - Comments (0) - Managed Service Providers

This video demonstrates how to perform an essential 5-minute warm up every morning to boost the security health of your customers' networks – while taking the first sips of your morning coffee. The ESET Security Warmup is designed to get every network body part in shape, by checking all the key indicators to understand the status of the clients and acting where needed.

The daily warmup includes:

1. Check your network overview
2. View unresolved incidents on the network
3. Resolve critical issues and risks
4. Diagnose ESMC server health
5. Resolve any remaining threats
6. Check the status of the firewall and ESET products
