

Getting started with ESET Remote Administrator (ERA) - Linux

Ondersteuning | ESET Nederland - 2025-03-07 - [Reacties \(0\)](#) - [6.x](#)

<https://support.eset.com/kb5984>

System Requirements and Installation

Prerequisites

Complete each prerequisite before proceeding to step 2. Refer to the [ESET Remote Administrator \(ERA\) Online Help](#) guide for the appropriate terminal commands for each package described below.

Have the License Key included in the new purchase email you received from ESET ready. [I lost my License Key.](#)

Verify your server and workstation operating systems are [ESET compatible](#).

[Uninstall any previously installed antivirus software.](#)

On your intended ESET Remote Administrator (ERA) Server machine:

Verify all [required ports are open and available](#).

[Install Java Runtime Environment](#) and ensure Java is updating correctly.

[ODBC Driver \(unixODBC_23 package\)](#).

Database server (MySQL) must be installed, accessible from your ERA Server and running.

The sever installation file must be set as an executable using the following terminal command: `chmod +x Server-Linux-x86_64.sh`

The minimum supported version of openssl (openssl-1.0.1e-30).

Xvfb for proper report printing on Linux Server systems without a graphical interface.

Cifs-utils for proper Agent deployment to a Windows OS.

Kinit + klist

If Active Directory is used on the ERA Server, a proper Kerberos configuration (/etc/krb5.conf).

Qt4 WebKit libraries (version 4.8), Ldapsearch, Wbinfo + ntlm auth, Snpmptrap, and an SELinux devel package.

Install ESET Remote Administrator (ERA)

Server

[Install ESET Remote Administrator Server for Linux](#). When ERA Server is installed, continue to Step 3 below.

Add Client Computers

[Add client computers to the ESET Remote Administrator](#). Once you have successfully added all client computers, continue to Step 4 below.

Deploy the ERA Agent

Small-to-medium businesses: Follow our deployment instructions for client operating system(s) in your network:

[Windows](#)

[Linux](#)

[OS X](#)

Enterprise Deployment: Many large networks use GPO or SCCM, [see our instructions](#) to deploy ERA Agent to your network using one of these methods.

Once you have successfully deployed the ERA Agent to all endpoints, continue to Step 5 below.

Install ESET Solutions on Client Computers

[Deploy ESET endpoint products to your client computers](#). Once you have successfully installed ESET solutions on all client computers, continue to Step 6 below.

Post Installation Tasks

Congratulations! You are now ready to manage your network using ESET Remote Administrator (ERA). The following articles will assist you in the completion of post installation tasks:

After installing ESET solutions on clients, you can create [static](#) or [dynamic](#) groups to organize your endpoints and begin [enforcing policies](#).

[Create, assign or schedule a new server task](#). For example, refer to the following Knowledgebase article: [Configure automated email or file reports in ESET Remote Administrator Web Console \(6.x\)](#).

[Create or manage your notifications](#).

[Organize your licenses](#).

[Manage client computers using client tasks](#). For example, refer to the following Knowledgebase article: [Virus Signature Database Update](#).
