Glibc 2.4 on Linux Server system causes an error with esets_daemon

Ondersteuning | ESET Nederland - 2025-03-07 - Reacties (0) - Legacy

https://support.eset.com/kb2273

If you receive a message

```
Child process esets_daemon did not handle signal 6, restart in 0 seconds
```

it is due to a bug in glibc 2.4 that has since been resolved by their developers in later builds. To resolve this error, install glibc 2.4.5 or later.

How can I find out which version of glibc I am using?

```
ldd --version
```

For additional assistance, consult the documentation for your specific Linux distribution.
