Issue

Change the port used by the ESET Remote Administrator Web Console (ERA Web Console) to allow a conflicting program to use port 443

Solution

Follow the steps below to change the port used by the ERA Web Console. For more information on the ports used by ESET Remote Administrator, see the following Knowledgebase article: [Which ports does ESET Remote Administrator use? \(6.x\)](#)

1. On the computer where the ERA Web Console is installed, navigate to:

```
C:\Program Files (x86)\Apache Software  
Foundation\Tomcat 7.0\conf\
```

2. Right-click **server.xml** and select **Open with** → **Notepad**.

3. Locate the following entry:

```
Connector server="0therWebServer" port="443"
```

4. Change the port from "443" to your desired port ("8443," in this

example). When you are finished making changes, save the .xml file and close Notepad.

5. Click **Start** → **Run**.

6. Type **services.msc** into the **Open** field and click **OK**.

Figure 1-3

7. Right-click the **Apache Tomcat 7.0 Tomcat7** service and select **Restart** from the context menu. You will now be able to access the ERA Web Console using the port you entered in step 4. Note that you must include the new port number in the URL to access the ERA Web Console (https://localhost:8443/era, in this example).
