How do I configure ESET Remote Administrator server replication?

Ondersteuning | ESET Nederland - 2024-08-28 - Reacties (0) - 5.x

<https://support.eset.com/kb950>

Figure 1-1

Configuring the lower server to allow "to" replication:

1. On each lower server allowed to replicate to the upper server, click **Tools** → **Server Options** and then click the **Replication** tab.
2. In the **Replication "to" settings** section, select the check box next to **Enable "to" replication**.
3. In the **Upper server** field, enter the name of the upper server.
4. Click **OK** to save the changes. Once the default replication interval elapses, your upper server will be populated with data from all lower servers.

Figure 1-2

NOTE:

For additional information on replication, please see the following section in the ESET Remote Administrator 5 User Guide:
