How do I find which version of DESlock+ Go is being used?

Anish | ESET Nederland - 2018-02-16 - Reacties (0) - ESET Endpoint Encryption

To find the version of DESlock+ being used please follow the steps below:

Run **DlpGo.exe** from the removable media.
On the password entry page click the **About** item in the lower left corner.

The version number of DESlock+ Go will be displayed in the middle of the about dialog. In our example version 1.85.0 build 91 is being used.
