How do I install ESET File Security for Microsoft Azure?

Ondersteuning | ESET Nederland - 2017-11-08 - Comments (0) - Managed Service Providers

<https://support.eset.com/kb3748>

1. Log in to your [Microsoft Azure](#) account. You can access the Azure portal at <http://portal.azure.com/>
2. Click **Browse All**.

Figure 1-2

Click the image to view larger in new window

3. Select the VM on which you want to install the ESET File Security VM extension and click **Extensions** → **Add** and then click **ESET File Security**.

Click the image to view larger in new window

5. In this window you can edit the installation settings.

License key - Enter a valid ESET-issued License key or leave this blank if you plan to activate your ESET product later.

Install Real-time file system protection - Choose whether you want to install Real-time file system protection, which scans files when they are accessed.

Install Web and email component - Choose whether you want to install Web and email components that protect you while browsing the Internet and communicating via

regular email protocols.

Install Device control - This feature monitors the use of external devices and peripherals on your server. You can set this to "NO" because Device control will have no effect on a VM.

Enable ESET LiveGrid® reputation system - Choose whether you want to enable the ESET LiveGrid® reputation system. We strongly recommend that you enable this, as LiveGrid® greatly enhances your protection from ransomware-type attacks.

Enable detection of potentially unwanted applications - Set your preference for the detection of potentially unwanted applications ([what is a potentially unwanted application?](#)).

Install ESET Remote Administrator Agent using created configuration file - If you want to install the ERA Agent, upload a configuration file from ERA Web Console. This configuration ".ini" file can be generated using [these steps](#).

Click **OK** to proceed with installation.

Figure 1-6

Click the image to view larger in new window

6. A new notification will be displayed with a progress bar while the extension is being added.
