How to use Optical Media Encryption

Anish | ESET Nederland - 2018-02-16 - Reacties (0) - ESET Endpoint Encryption

To author optical media that is encrypted please follow the steps below:

Note: Optical Media can only uses file level encryption only and not FDE. This is unlike other devices covered by the removable media policy.

Select **Optical Media Encryption** from the DESlock+ **Removable Media** menu.

The Optical Media Wizard will appear. Click **Next**.

Click **Browse** to locate the folder you wish to burn to an encrypted disc.
Select the folder to use then click **OK**.
Click **Next** to proceed with the wizard.

Select the key and encryption type you wish to use from the key manager then click **Next**.

Select the Optical Media writing drive containing the blank media then click **Next**.

Select **Next** to begin burning.

DESlock will then carry out the Encryption process via Optical Media.
