ESET Server Security for Microsoft Windows Server version 11.1.12005.0 has been released

2024-10-16 - Steef | ESET Nederland - Reacties (0) - Feature release

ESET Server Security for Microsoft Windows Server version 11.1.12005.0 has been released and is available for download.

Due to the parallel release of the configuration module (CE), an additional release for automatic updates will occur in three phases, starting on October 29, 2024, and ending on November 26, 2024.

This is to assure full configuration functionality when using automatic update as the product update delivery method. The installation packages downloaded through the official web or ESET PROTECT repositories already contain the latest version of CE so the full configuration functionality is ensured.

Changelog

- NEW: Support for On-demand Vulnerability scan for Vulnerability & Patch Management.

- NEW: Vulnerability & Patch Management logging capability both locally and reporting to the ESET PROTECT console.

- NEW: ESET LiveGuard now supports On-demand scans for Hyper-V and OneDrive.

- NEW: RDP Access restriction feature for non-FW products.

- IMPROVED: Brute force attack protection was extended to cover Microsoft SQL and MySQL protocols.

- IMPROVED: Each OneDrive scan has now a separate diagnostic log.

- IMPROVED: Various Override mode modifications for better security and user experience.

- CHANGED: The configuration message about the availability of elevated permissions account setup for Automatic Exclusions is now suppressed if the product was installed through the ESET PROTECT Web Console.

- FIXED: Occasional freeze/restart issue on the first update of the Real-time protection module on specific environments.

- FIXED: A problem where performance/ detection exclusions settings could not be saved on certain Windows Server Core operating systems.

- FIXED: A problem with failing installation with parameter "…ADDLOCAL=ALL REMOVE=%component%".
