2019-02-19 - Perry | ESET Nederland - Reacties (0) - Hotfix

We have reached the technical readiness for ne ESET Security Management Center 7.0 hotfix with release scheduled to 21st February 2019, Thursday.
Changes concern MDM components for both Windows and Linux; and repacked All-in-one installer. All other components remain the same.

Product: ESET Security Management Center
Version: 7.0.72.2 (MDM Windows-7.0.411.0; MDM Linux-7.0.524.0)
Release Stage: Hotfix
Release Date: February 21, 2019
Languages: All ESMC Languages
Distribution: Web/Repository

Changelog:

Fixed: It´s not possible to recover the iOS device from the lost mode after issuing the Find command from ESMC.
Fixed: Not all files are being removed from the installation directory after uninstallation of MDM Connector.
Fixed: Problem with the old version of MDM being still reported as installed after an upgrade, despite being correctly upgraded to the latest version due to the duplicated registry entries.
Fixed: MDM Connector crashes upon loading HTTPS certificate.
