Release Announcement: ESET Endpoint Encryption Server v3.2.2

2021-03-24 - Steef | ESET Nederland - Reacties (0) - Releases

let me inform you that today, March-24th-2021, we released ESET Endpoint Encryption Server v3.2.2

What is new/ has changed in EEES v3.2.2:

- Added: Added back switch organisation button for multi-tenant installations
- Improved: Active Directory sync algorithm change to improve performance
- Improved: In control panel you can no longer lock out your own login
- Improved: PHP memory usage when running reports with very large numbers of workstations or users. This could results in reports failing unless PHP memory was increased above 128M.
- Improved: Help link should now redirect to the correct page rather than the default landing help page
- Fixed: Crash issue with server service when receiving malformed input
- Fixed: Can now change the implicit login role of a console login
- Fixed: Unused license can now be removed from one organisation even when it is still being used by a different organisation
- Fixed: Various localisation improvements
- Fixed: Problem in preinstall detecting Apache installations
