Release Deslock Enterprise Server 2.10.10

2018-10-03 - Perry | ESET Nederland - Reacties (0) - Releases

Change-log Enterprise Server:

- Implemented the auto update checks for multi-tenant server installations
- Added software feature flag to hide OU filter in AD settings by default
- Allowed TPM pin to be available to read before workstation confirms encryption has started
- AD test function honours OU filter selection
- AD test function no longer saves OU filter selection
- Fixed problem with extra CRLF pair in output from server which could corrupt some downloaded files
- Fixed crash when opening AD setting caused by more than 500 OUs in domain
- Fixed crash that could sometimes occur when parsing OU results
- Fixed activating an already encrypted workstation via auto enrollment
- Fixed problem downloading workstation log when organisation name contained an ampersand
- Fixed workstation appearing unmanaged if being adopted with no user logins
- Converted the workstation log to HTML 4.01 Strict format
- Delete button is disabled for current active instance in control panel when in multi-tenant mode
- Added some missing translations
- Fixed problem with full backup file not being overwritten and backup left in working folder
- Removed count of activated users from organisation report
- Changed dlpes logger to use a rotation file by default rather than one single giant file
- Removed spaces from commonName when used as the email prefix field in AD sync

Known issues in this version:

- Password encryption UI for full backup function is not implemented
- There is no UI to enter a password for instance backup restore
- There is no support for Windows XP or Windows Server 2003
- The restore process is not compatible with previous versions of the DLPES
- There is no support for installing as a local proxy
- If you upgrade an existing local proxy server it will leave the server in legacy mode and will not migrate the organisation to multi-tenant mode
- The HTTP login page will not display the HTTPS link even if HTTPS is enabled
- Console envents are not generated for login failures
- The password reset tool will not display any events for logins

Build version of Server: 2.10.10
